## Abstracts

The global Heave Compensated Cranes market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

When the offshore crane loads and unloads cargo between the ship and the ship, the ship is affected by the waves, which will cause the cargo to shake. When lifting precision instruments and valuables in the air and underwater, the cargo may be damaged at least, and the operation safety may be serious. ACCIDENT. In order to improve the safety of crane offshore operations and increase the operating window, wave compensation technology is the most effective solution. The wave compensation system can compensate the heave movement of the suspended cargo caused by the influence of waves on the ship. Under the action of this system, the suspended cargo can remain relatively static. Even in complex sea conditions, the Active Heave Compensation System (AHC) can respond quickly and expand the range of wave height and wind speed when hoisting, as well as safe operation under severe working conditions.

This report studies the global Heave Compensated Cranes production, demand, key manufacturers, and key regions.
