According to our (Global Info Research) latest study, the global Heavy Alkali market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Heavy alkali is a chemical substance. Both heavy alkali and light alkali refer to pure alkali; Their difference is the content of sodium carbonate and salt content. Currently, in China's national standard for soda ash, the salt content of sodium carbonate premium products is generally $\geq 0.7\%$, which is heavy alkali. Heavy alkali is obtained by hydration of light alkali to increase crystal water, with a higher density and stacking degree than light pure alkali. Water method can be divided into solid-phase water method and liquid-phase water method. The production cost of liquid-phase water method is high, and currently, solid-phase water method is the main method in China.
