According to our (Global Info Research) latest study, the global Heavy Commercial Vehicle EPS market size was valued at USD 7713.9 million in 2023 and is forecast to a readjusted size of USD 11750 million by 2030 with a CAGR of 6.2% during review period.

The electric power steering is developed on the basis of the traditional mechanical steering system. It uses the power generated by the electric motor to help the driver perform steering operations. The system is mainly composed of three parts: signal sensing device (including torque sensor, steering wheel angle sensor and vehicle speed sensor), electronic control unit and steering assist mechanism (motor, clutch, reduction gear mechanism, etc.).

With the rapid development of the global logistics and freight industry, heavy commercial vehicles have become an important tool in fields such as cargo transportation and engineering construction. In heavy-duty commercial vehicles with more difficult handling, electric power steering systems can improve driving maneuverability and safety and reduce driver fatigue, so they have attracted much attention from commercial vehicle owners and operators.
