The global Heavy Duty Gear Oils or Industrial market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Heavy Duty Industrial Gear Oil is a lubricant used to lubricate gear systems in large industrial equipment. These systems typically operate under high loads, such as machines in heavy industries such as steel, mining, paper, cement, etc. Heavy-duty industrial gear oils usually have high viscosity and high temperature performance, which can provide stable lubrication under high temperature and pressure, and reduce wear and friction. In addition, they contain additives such as extreme pressure agents and antioxidants to improve their anti-wear and durability properties, thereby prolonging the life of the equipment.
