A rail pantograph is a device used on electric trains to collect electrical power from overhead lines. It's a critical component in electric rail systems, allowing trains to operate without onboard power sources. 'Heavy rail' typically refers to rail systems designed to handle high volumes of traffic and heavier loads. This includes urban transit systems (like metros) and long-distance trains that operate on major rail networks.

According to the data of China Association of Metros, by the end of 2022, 55 cities in mainland China have opened urban rail transit and 308 operating lines. The total length of operating lines is 10287.45 km, ranking first in the world and accounting for 26.2% of the total global mileage. 1080.63 km of new operating lines were added in 2022. By the end of 2022, 545 cities in 78 countries and regions will have opened urban rail transit, with more than 41,386.12 km of operational mileage. Compared to 2021, the total mileage of urban rail transit worldwide would increase by 4,531.92 km, an increase of 11.0%, of which 1,293.45 km of subway mileage, 788.11 km of light rail mileage and 2,450.36 km of tram mileage would increase, accounting for 28.5%, 17.4% and 54.1% of the total increase respectively.
