Abstracts

The global Heavy Truck Bearing market size is expected to reach \$ 2035 million by 2032, rising at a market growth of 5.8% CAGR during the forecast period (2026-2032). Heavy-duty truck bearings are critical components used in high-load, high-mileage operations of medium and heavy-duty trucks, tractors, trailers, and engineering vehicles. They support rotating parts, reduce friction, and withstand combined radial and axial loads. The most typical heavy-duty truck wheel end bearing is the tapered roller bearing: its structure is an 'outer ring + inner ring assembly: inner ring, rollers, cage,' capable of simultaneously bearing radial and axial loads, and often arranged in pairs in the wheel hub to achieve rigid guidance and load-bearing capacity. In 2025, the global production of heavy truck bearings will reach 23.4 million units, with an average price of approximately US\$56.99 per unit and a gross profit margin of approximately 19.7%-34.86%, resulting in an annual production of 2 million units.

The core demand for heavy-duty truck bearings is driven by the high uptime of fleets and the total cost of ownership (TCO): wheel end bearings withstand combined loads and harsh environments; failure can lead to downtime and safety risks. Therefore, fleets prefer bearings and matching solutions with higher reliability, stronger sealing, and better lifespan consistency. From an engineering perspective, the tapered roller bearing, capable of simultaneously bearing radial and axial loads and often arranged in pairs, is the classic architecture for heavy-duty truck wheel ends.

The structural trend on the supply side is a shift from piecemeal assembly to pre-assembled/pre-adjusted wheel-end solutions to reduce manual adjustment errors and time. For example, pre-adjusted structures use precision spacers to control the pitch of tapered roller bearings, reducing manual adjustments. This will drive the penetration of 'bearing + wheel-end modularization' at the system level, but for the bearing itself, it means higher consistency and matching requirements.

Meanwhile, the electrification of heavy-duty trucks is also changing the boundaries of

operating conditions. The IEA points out that electric truck sales will grow by nearly 80% in 2024, and although the purchase cost is higher, the increased TCO competitiveness is driving sales growth. Electric heavy-duty trucks often have higher curb weight and faster torque response, further increasing the requirements for bearing load-bearing capacity, sealing, low friction, and durability in the wheel-end and transmission systems.
