Abstracts

The global Heavy Water market size is expected to reach \$ 96.8 million by 2029, rising at a market growth of 7.7% CAGR during the forecast period (2023-2029).

Global key players of heavy water include Isowater, Cambridge Isotope Laboratories, Mesbah Energy, Heavy Water Board (HWB), etc. The top three players hold a share over 80%. North America is the largest producer of heavy water, holds a share over 56 percent. In terms of product type, Purity 99.8% is the largest segment, occupied for a share of 40%, And in terms of application, Deuterated NMR Solvents has a share about 45 percent.

Deuterium oxide, also known as “heavy water” or “deuterium water”, is the compound of oxygen and the heavy isotope of hydrogen, namely deuterium. It is called heavy water because its density is greater than H₂O and its chemical formula is D₂O. Deuterium contains a neutron and proton in its nucleus, which makes it twice as heavy as protium (hydrogen), which contains only one proton. Deuterium oxide is colorless and odorless liquid in normal temperature and pressure. Compared to ordinary water, its chemical characteristic is relatively inactive with specific gravity of 1.10775 (25 °C), melting/freezing point of 3.82 °C, and boiling point of 101.42 °C. The hydrogen bond strength and degree of association between heavy water molecules are both stronger than that of ordinary water molecules.

This report studies the global Heavy Water production, demand, key manufacturers, and key regions.
