Abstracts

A Helical Screw Blower is a positive displacement rotary machine, consisting a pair of intermeshing rotors, which are also known as: male and female rotors. These rotors move towards each other as the volume trapped between them and the housing decreases.

According to our (Global Info Research) latest study, the global Helical Screw Blowers market size was valued at USD 716.4 million in 2022 and is forecast to a readjusted size of USD 981.1 million by 2029 with a CAGR of 4.6% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Screw Blowers are more advanced compared with traditional roots style blower. Their profile resembles a helical screw which assist an engine producing exceptional horsepower. Roots or lobe type blower suffered poor efficiency compared with screw blowers as no internal compression taking place during the 360-degree rotation cycle, resulting in lower efficiency. Thus, rotary screw blowers hold substantial potential as a replacement to the roots blowers in the future years.
