## Abstracts

According to our (Global Info Research) latest study, the global Helical Wind Turbine market size was valued at US\$ 6019 million in 2024 and is forecast to a readjusted size of USD 8164 million by 2031 with a CAGR of 4.5% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A helical wind turbine is a type of wind turbine characterized by its helical or spiral blade design, which allows it to capture wind energy efficiently from any direction. Unlike traditional horizontal-axis wind turbines, which typically have blades that rotate around a horizontal shaft, helical turbines have blades that are twisted in a spiral shape, enabling them to harness wind energy more effectively in turbulent or variable wind conditions. This design can reduce noise and vibration, and often requires less maintenance. Helical wind turbines are particularly suited for urban environments or areas with inconsistent wind patterns, making them an innovative option for renewable energy generation.
