Helicopter FCS is an integral part of a helicopter, and it is used to operate, control, and monitor the flight without the continuous supervision of the pilot. They can be mechanical, hydraulic, pneumatic, and electrical systems that automate a wide variety of in-flight tasks.

Scope of the Report:

This report focuses on the Helicopter Flight Control Systems in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

One of the primary growth drivers for this market is the advent of automatic flight control systems (AFCS). Besides offering flight automation, AFCS has improved the stability and handling of helicopters by monitoring both their internal and external conditions. Also, an automated FCS ensures safe and efficient operation of helicopters by securing their landing during harsh climatic conditions and low visibility. Manufacturers are coming up with several improvements in FCS such as adaptive flight, aeroservoelasticity, fault tolerant flight, inertial navigation, and trajectory control of an unmanned space re-entry vehicle.

Technological advancements in the market has led to the introduction of fly-by-wire (FBW) technology, which is an advanced version of FCS. This system stabilizes the aircraft automatically with its electronic flight control technology. It comprises a flight computer that analyses the control activities of the pilot and sends electric signals to the flight control surface actuators without any mechanical linkage. This shift towards the

increased use of FBW control systems in helicopters will propel the growth of this market during the forecast period.

The worldwide market for Helicopter Flight Control Systems is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
