A helicopter is a type of rotorcraft in which lift and thrust are supplied by rotors. This allows the helicopter to take off and land vertically, to hover, and to fly forward, backward, and laterally. These attributes allow helicopters to be used in congested or isolated areas where fixed-wing aircraft and many forms of VTOL (vertical takeoff and landing) aircraft cannot perform.

Scope of the Report:

This report focuses on the Helicopter in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The increasing demand for medium helicopters, shift towards civil helicopters market, growing joint ventures between global manufacturers, increased demand for technologically advanced combat helicopters, increasing up-gradation of existing fleet, tie-up between helicopters manufacturers and aviation colleges are the key growth drivers for the global helicopter market. Several countries have high demand for helicopters in their defense sector, which finally shows a growth in the market.

Civil helicopters are widely being used by government bodies, mainly for law-enforcement activities and emergency response services. The market in civil sector provides helicopters for various purposes including transportation, private use, government use, and other purposes. The most popular helicopters are light helicopters with MTOW 3,175kg or less. The civil helicopter is estimated to have increased demand in emergency medical services and corporate sector. Increasing customer compliance for more equipped and sophisticated avionics, and flight safety are expected to fuel the
