According to our (Global Info Research) latest study, the global Helicopter Wheeled Landing Gear market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Helicopter landing gear is a device that supports a helicopter on the ground and usually includes one or more support legs. Helicopter wheel landing gear can be subdivided into retractable and non-retractable types. The wheeled landing gear reduces the difficulty of moving the helicopter, and it can be towed by external force or roll by itself. The non-retractable wheeled landing gear has the effect of enhancing the cushioning effect of hard landings. Retractable to reduce resistance and enhance stealth effect. The wheeled landing gear also allows the helicopter to take off with a rolling take-off, which can carry a larger load capacity than a normal vertical take-off.

Helicopter wheeled landing gear is mostly used in medium and heavy helicopters.
