Abstracts

The global Helicopter Wheeled Landing Gear market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Helicopter wheeled landing gear is mostly used in medium and heavy helicopters.

Helicopter landing gear is a device that supports a helicopter on the ground and usually includes one or more support legs. Helicopter wheel landing gear can be subdivided into retractable and non-retractable types. The wheeled landing gear reduces the difficulty of moving the helicopter, and it can be towed by external force or roll by itself. The non-retractable wheeled landing gear has the effect of enhancing the cushioning effect of hard landings. Retractable to reduce resistance and enhance stealth effect. The wheeled landing gear also allows the helicopter to take off with a rolling take-off, which can carry a larger load capacity than a normal vertical take-off.

This report studies the global Helicopter Wheeled Landing Gear production, demand, key manufacturers, and key regions.
