Helium explosion-proof solenoid valve means that when the coil is energized, the pilot spool is sucked in, the pilot hole opens, the upper chamber of the valve is depressurized, the piston is pushed by the pressure of the media in the lower chamber, and the solenoid valve opens. When the coil is de-energized, the pilot spool is reset by the spring, the pilot hole is closed, the upper chamber of the valve is pressurized by the piston throttle hole and the thrust of the reset spring, the solenoid valve is closed.
