Abstracts

Helium is a chemical element with symbol He and atomic number 2. It is a rare atmospheric gas which is colorless, odorless, tasteless, nontoxic, nonflammable and only slightly soluble in water. The concentration of Helium in the atmosphere by volume percent is 5.24×10^{-4} . Its boiling points and melting points are the lowest among all the elements and it exists only as a gas except in extremely cold conditions. Helium is principally shipped and used in either gaseous or liquid form for nuclear reactors, semiconductors, lasers, light bulbs, superconductivity, instrumentation, medical applications, cryogenics, MRI and R & D laboratory research.

Scope of the Report:

This report focuses on the Helium in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The Helium industry concentration is very high; as a result there are few manufacturers in the world, and they focused on USA, Russia, Qatar and Algeria. In the world wide, giant manufactures mainly distributed in USA, Russia, Qatar and Algeria. American has a long history and unshakable status in this industry.

Many companies have several plants, but they do not usually close to aimed consumption market. So the product has high transportation costs.

From the previous five years, the production and capacity were increasing but the growth rate is very low. The Helium gas is non-renewable energy resource and the production countries make relevant policies to ensure continuous use of helium. There are agencies who predicted that Helium will dry up in the future.

The worldwide market for Helium is expected to grow at a CAGR of roughly xx% over

the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
