According to our (Global Info Research) latest study, the global Helium-Neon Laser Tubes market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

A HeNe laser tube is a continuous operating or continuous wave (CW) gas laser. The gain medium is a 10:1 gas mixture of helium and neon, pressurized inside a glass tube. Applying a DC current to the electrodes across the helium-neon tube excites the helium atoms to a metastable state. Thus, when excited, helium atoms can efficiently transfer energy to neon atoms with very similar excitation energies, resulting in a population inversion.
