According to our (Global Info Research) latest study, the global Helium Purification Device market size was valued at US\$ 768 million in 2025 and is forecast to a readjusted size of US\$ 1359 million by 2032 with a CAGR of 8.6% during review period.

Helium purification device is an international frontier research field, and the methods used include low temperature condensation, membrane separation, pressure swing adsorption, chemical adsorption and other methods. The common method of helium purification cycle equipment is low temperature and condensation method. In addition, a large number of new technologies in the low-temperature field have been adopted during the equipment development process, including vibration reduction of high-pressure helium compressors, special welding technology for low-temperature and high-pressure copper pipes, and low-temperature high-pressure joint sealing technology, etc., to optimize products. On this basis, a breakthrough has been made in the purification technology of membrane separation method, and the low-purity helium with a purity of ?10% is purified to more than 99.5% through a composite purification and separation method, and the system purification recovery rate is ?60%.
