The global Helium Recovery, Purification & Refining Systems market size is expected to reach \$ 2792 million by 2032, rising at a market growth of 7.0% CAGR during the forecast period (2026-2032).

Helium recovery, purification and refining systems refer to integrated equipment that captures helium from industrial off-gas, natural gas streams, or laboratory exhaust, and purifies it through PSA, membrane separation, cryogenic distillation, and adsorption technologies to achieve high-purity helium (5N?6N, 99.999%+). These systems are widely used in semiconductors, MRI, cryogenics, aerospace, and scientific research. The helium purification and recovery industry consists of upstream helium sources, midstream equipment/system integration, and downstream applications. Upstream includes natural gas helium reserves and industrial waste gas streams, concentrated in the US, Qatar, and Russia. Midstream involves PSA systems, membrane modules, cryogenic distillation columns, compressors, and control systems, led by major gas companies and cryogenic equipment manufacturers. Downstream applications include semiconductors, MRI, superconducting systems, aerospace, and scientific research. Increasing helium scarcity is driving a shift from purchased helium to closed-loop recovery systems.
