Abstracts

Hemodialysis is a treatment used when your kidneys fail (Stage 5 Kidney Disease) and can no longer clean your blood and remove extra fluid from your body. A hemodialysis access or vascular access is a way to reach your blood for hemodialysis. Hemodialysis catheter is a medical equipment that is inserted into the body to access the intravascular space during hemodialysis. The blood from the body travels through the hemodialysis catheter to a special filter called dialyzer, where the blood is purified and sent back to the body. A hemodialysis Catheters is a catheter used for exchanging blood to and from a hemodialysis machine and a patient.
