Abstracts

Hemoglobin is a protein found in the red blood cells (RBCs) that carries out oxygen transportation throughout the body. Hemoglobin tests are carried out to measure the amount of hemoglobin present in the blood. These tests are usually performed during complete blood count as a routine health checkup or to determine the presence of any disease, which could occur due to low count of RBCs. Patients commonly undergo hemoglobin test due to reasons such as fatigue, poor health, or unexplained weight loss. The centralized hemoglobin testing methods are useful for the diagnosis of diabetes and anemia.

Scope of the Report:

This report studies the Hemoglobin Testing market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Hemoglobin Testing market by product type and applications/end industries.

A major factor contributing to the growth in this market is growing preference for direct-to-consumer testing. Direct-to-consumer testing is a growing trend in this market as most patients prefer home-care to laboratories. In this mode of testing, the individual does not need to visit laboratories or hospitals for tests as the laboratories send a professional person to the individual's doorstep to collect the blood sample with the help of collection devices. Once, the tests are performed, and results are received, the laboratory sends back the test results electronically to the individual. Advantages like the ease of testing and the availability of quick test results will lead to the high preference for direct-to-consumer testing during the forecast period.

The Americas dominated this market during 2017 and is anticipated to retain its dominating hold over the market until the end of 2023 owing to the high sales of hemoglobin testing products such as analyzers and reagents and consumables. Among all the countries in this region, the market in Brazil and the US will grow rapidly due to the high demand for medical devices. Also, with the increasing preference for point-of-care testing (POCT) among patients, the prospects for growth in this market will have a positive outlook until the end of the forecast period.

The global Hemoglobin Testing market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.
