Abstracts

Hemoglobinopathies are a diverse set of congenital blood ailments that are a consequence of disparities in the structure and/or synthesis of hemoglobin. Hemoglobinopathies are genetic single-gene disorders that lead to an abnormal structure of one of the globin chains of the hemoglobin molecule, rendering it unable to carry oxygen through the body, which leads to anemia or other medical abnormalities. The most common hemoglobinopathies are sickle cell disease, alpha thalassemia, and beta thalassemia.
