## Abstracts

According to our (Global Info Research) latest study, the global Hemoperfusion Production market size was valued at USD 590.6 million in 2023 and is forecast to a readjusted size of USD 1546.2 million by 2030 with a CAGR of 14.7% during review period.

Hemoperfusion is a treatment technique in which large volumes of the patient's blood are passed over an adsorbent substance in order to remove toxic substances from the blood. Adsorption is a process in which molecules or particles of one substance are attracted to the surface of a solid material and held there. These solid materials are called sorbents. Hemoperfusion is sometimes described as an extracorporeal form of treatment because the blood is pumped through a device outside the patient's body.

Global Hemoperfusion Production key players include Baxter (Gambro), Jafron Biomedical, Biosun Medical, Asahi-Kasei, etc. Global top four manufacturers hold a share over 80%.

China is the largest market, with a share over 65%, followed by Europe, and Japan, both have a share about 30 percent.

In terms of product, Resin Adsorption is the largest segment, with a share over 65%. And in terms of application, the largest application is Hepatic Encephalopathy, followed by Certain Autoimmune Diseases, Overdose, Specific Intoxications, etc.
