Abstracts

The global Hemoperfusion Production market size is expected to reach \$ 2358 million by 2032, rising at a market growth of 15.0% CAGR during the forecast period (2026-2032).

Hemoperfusion is a treatment technique in which large volumes of the patient's blood are passed over an adsorbent substance in order to remove toxic substances from the blood. Adsorption is a process in which molecules or particles of one substance are attracted to the surface of a solid material and held there. These solid materials are called sorbents. Hemoperfusion is sometimes described as an extracorporeal form of treatment because the blood is pumped through a device outside the patient's body.

Global Hemoperfusion Production key players include Baxter (Gambro), Jafron Biomedical, Biosun Medical, Asahi-Kasei, etc. Global top four manufacturers hold a share over 80%.

China is the largest market, with a share over 65%, followed by Europe, and Japan, both have a share about 30 percent.

In terms of product, Resin Adsorption is the largest segment, with a share over 65%. And in terms of application, the largest application is Hepatic Encephalopathy, followed by Certain Autoimmune Diseases, Overdose, Specific Intoxications, etc.

This report studies the global Hemoperfusion Production production, demand, key manufacturers, and key regions.
