According to our (Global Info Research) latest study, the global Hemostats and Tissue Sealants market size was valued at USD 3377.5 million in 2023 and is forecast to a readjusted size of USD 4992.6 million by 2030 with a CAGR of 5.7% during review period.

Blood clotting or coagulation, is an important process that eliminates excessive bleeding when a blood vessel is damaged. Platelets and proteins work together to stop the bleeding by forming a clot over the injury. Blood clottage is one of the mechanisms that reduce the loss of blood from damaged blood vessels. Hemostats and tissue sealants are used post-surgery or traumatic injury to bind or hold external tissue (skin) as well as internal tissue (blood vessels). Some key types of hemostats and tissue sealants include fibrin sealants, collagen-based compounds, synthetic agents, and tissue adhesive glues such as hydrogels and glutaraldehyde glues. Fibrin sealants have a wide range of medical applications.

According to our research, the global market for medical devices is estimated at US$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.
