Abstracts

The global Henagliflozin Proline Tablets market size is expected to reach \$ 484 million by 2032, rising at a market growth of 14.6% CAGR during the forecast period (2026-2032).

Henagliflozin Proline Tablets are a sodium-glucose cotransporter 2 (SGLT-2) inhibitor. By inhibiting the reabsorption of glucose in the kidneys, they allow excess sugar to be excreted directly in the urine, thereby lowering blood glucose levels. They are mainly used to improve glycemic control in patients with type 2 diabetes. Characterized by insulin-independent hypoglycemic effect, clear cardiovascular benefits, and positive regulatory effects on body weight and blood pressure, the drug can be used alone or in combination with other antidiabetic agents such as metformin. It is suitable for the daily management of type 2 diabetes in adults, providing a novel and well-tolerated oral hypoglycemic option for clinical practice. In 2025, global Henagliflozin Proline Tablets production reached approximately 120 million bottles.

As the first domestically developed oral SGLT-2 inhibitor for diabetes in China, Henagliflozin Proline Tablets have grown amid the expanding global and domestic demand for diabetes treatment and the rapid rise of the SGLT-2 inhibitor class. At present, SGLT-2 inhibitors have become core medications for the management of type 2 diabetes due to their unique insulin-independent mechanism, reliable glucose-lowering efficacy, and dual cardiorenal benefits. While the market is still dominated by international originator brands, domestic innovative drugs and generics are rapidly gaining share. Relying on its advantages as a local innovative product, support from medical insurance coverage, favorable safety profile, and compatibility in combination therapies, henagliflozin has achieved rapid penetration in the domestic market, with particularly strong growth in public medical institutions. Going forward, its market

potential is expected to keep expanding as its indications are extended to include heart failure and chronic kidney disease, combined preparations are launched, and overseas layout progresses. Meanwhile, the product will face intense competition from international pharmaceutical giants, domestic generics, and new types of hypoglycemic agents. Overall, it is on a development path featured by breakthroughs of domestic innovation, indication-driven growth, and dual drivers of medical insurance and clinical value.
