HEPA Air Purification System is a device based on high-efficiency air filtration technology. Its core component is the HEPA filter, which can efficiently intercept suspended particles with a diameter of ≥ 0.3 microns, with a filtration efficiency of more than 99.97%. The system removes particles in the air, including dust, pollen, smoke, bacteria, viruses and some chemical pollutants, through physical interception mechanisms (including inertial impact, interception effect and diffusion effect), significantly improving indoor air quality. It is designed to provide reliable air purification solutions for places that require a high cleanliness environment.
