## Abstracts

The global Heparin Magnetic Beads market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The heparin coupled to the surface of the magnetic beads has a large number of negatively charged sulfate ion groups, which can have a strong binding ability with positively charged proteins at a certain pH value, and at the same time, heparin can grow through specific affinity. The factor is combined with antithrombin ATIII, therefore, the target factor can be rapidly and efficiently purified from plasma in one step by means of magnetic separation.

This report studies the global Heparin Magnetic Beads production, demand, key manufacturers, and key regions.
