According to our (Global Info Research) latest study, the global HER2 Target Drugs market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Activation of the epidermal growth factor receptor (EGFR) family of transmembrane receptor tyrosine kinases can regulate signaling pathways for cell proliferation and survival. HER2 is a non-ligand-binding member of this family and exerts its activity through heterodimerization with other EGFR family members. Activation of HER2 function can promote tumorigenesis, so scientists have begun research on HER2-targeted drugs in HER2 gene-related cancers.
