## Abstracts

The global HER2 Target Drugs market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Activation of the epidermal growth factor receptor (EGFR) family of transmembrane receptor tyrosine kinases can regulate signaling pathways for cell proliferation and survival. HER2 is a non-ligand-binding member of this family and exerts its activity through heterodimerization with other EGFR family members. Activation of HER2 function can promote tumorigenesis, so scientists have begun research on HER2-targeted drugs in HER2 gene-related cancers.

This report studies the global HER2 Target Drugs production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for HER2 Target Drugs, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
