## Abstracts

The global Herb Essential Oil market size is expected to reach \$ 7741 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032). Global sales of herbal essential oils reached 96,000 tons in 2025, with an average price of US\$54,255 per ton.

Herbs are the plant, root, stem, flower or leaf, either fresh cut or dried. Essential oils are the concentrated essence of the plant. Essential Oils are distilled and the whole plant constituents are not present, just the oils.

The raw materials for herbal essential oils all come from renewable herbal plants (leaves, flowers, stems, and roots). In China, the main production areas are concentrated in Guangxi, Guangdong, Yunnan, and Guizhou. Farmers cultivate these plants scattered across different areas, with each household typically cultivating less than 5 mu (approximately 0.33 hectares). This results in numerous batches of raw materials and significant variations in content. For example, patchouli contains approximately 1.5-2.5% oil, and producing 1 kg of essential oil requires 40-70 kg of hay. Raw material costs account for approximately 30-40% of the ex-factory price. In the cost structure, excluding raw materials, energy and equipment depreciation account for 25-30% (coal/electric boiler distillation for 8-12 hours), labor and packaging account for 15-20%, and testing, transportation, and losses combined account for approximately 10-15%. If microwave-assisted distillation or CO<sub>2</sub> supercritical extraction is used, the equipment investment doubles, but the oil yield can increase by 10-20%, making it a preferred choice for high-end products to offset profit margins squeezed by raw material price fluctuations.

This report studies the global Herb Essential Oil production, demand, key manufacturers, and key regions.
