## Abstracts

The global Herbal Tea Extracts market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Herbal tea extracts are widely used in the preparation of nutraceuticals and functional foods. The active ingredients in these extracts, such as polyphenols, flavonoids and volatile oils, are believed to have antioxidant, anti-inflammatory and other health properties. Scientists and researchers continue to delve deeper into the composition of different herbal teas and their effects on health. This includes research on antioxidants, anti-inflammatory, anti-cancer, and antibacterial properties. As technology continues to advance, researchers are conducting more in-depth studies on the isolation and purification of bioactive components in herbal teas. This has contributed to a better understanding of the pharmacological and biological activities of the various constituents. Some herbal tea extracts have natural colours and flavours and are used in the food and beverage industry as an alternative to artificial additives. Some herbal teas traditionally recognised as beneficial for health are being validated by modern science. These studies are helping to understand the scientific basis of traditional medicine and may provide the basis for new health foods and medicines. Researchers are also exploring some of the more emerging herbs and the potential health benefits of blended teas, which may involve mixing multiple botanicals in a tea for a more holistic effect.

Herbal Tea Extracts are not technically true teas as they are not derived from the *Camellia sinensis* plant. Instead, they are often infusions of herbs, fruits, flowers, or other plant materials. Common herbal tea extracts include chamomile, peppermint, and hibiscus.
