A hernia is a bulge of fat or intestinal tissue in the abdominal cavity due to weakening of the abdominal wall muscles. There are many types of hernias, but the most common is the inguinal hernia. Surgery can repair the defect that caused the hernia and avoid complications such as incarceration or strangulation. The surgery involves 'moving' tissue inside the abdominal cavity and strengthening the thinned abdominal wall area. In surgery, an artificial mesh is usually implanted on the gap in the abdominal wall that needs to be repaired and strengthened, and scar tissue is formed after cutting the abdominal wall structure to achieve the purpose of strengthening the abdominal wall muscles.
