Abstracts

Herpes labialis, also known as cold sores, is a type of infection by the herpes simplex virus that affects primarily the lip. Symptoms typically include a burning pain followed by small blisters or sores. The first attack may also be accompanied by fever, sore throat, and enlarged lymph nodes. The rash usually heals within 10 days, but the virus remains dormant in the facial nerve. The virus may periodically reactivate to create another outbreak of sores in the mouth or lip.
