According to our (Global Info Research) latest study, the global Herriott Gas Absorption Cell market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The Herriott gas absorption cell is an optical device used to enhance the effect of laser-gas interaction. The absorption pool is mainly composed of a pool body, a shockproof base, a window, a reflector and a gas inlet and outlet.

In the Herriott gas absorption cell, the laser beam is reflected back and forth multiple times when passing through the gas absorption cell, and interacts with the gas to be measured during each reflection. In this way, the path length between the laser and the gas can be effectively extended, thereby increasing the interaction time between the light and the gas, and improving the sensitivity and accuracy of the measurement. The Herriott gas absorption cell has the characteristics of multiple reflections, long optical path, small size, high temperature resistance, corrosion resistance, and easy installation, and provides a high-sensitivity and high-precision measurement method.
