Abstracts

The global Herriott Gas Absorption Cell market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

In the Herriott gas absorption cell, the laser beam is reflected back and forth multiple times when passing through the gas absorption cell, and interacts with the gas to be measured during each reflection. In this way, the path length between the laser and the gas can be effectively extended, thereby increasing the interaction time between the light and the gas, and improving the sensitivity and accuracy of the measurement. The Herriott gas absorption cell has the characteristics of multiple reflections, long optical path, small size, high temperature resistance, corrosion resistance, and easy installation, and provides a high-sensitivity and high-precision measurement method.

The Herriott gas absorption cell is an optical device used to enhance the effect of laser-gas interaction. The absorption pool is mainly composed of a pool body, a shockproof base, a window, a reflector and a gas inlet and outlet.

This report studies the global Herriott Gas Absorption Cell production, demand, key manufacturers, and key regions.
