According to our (Global Info Research) latest study, the global Heterodyne Laser Interferometer market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

A heterodyne laser interferometer is a type of laser interferometer that utilizes the principle of heterodyne detection. In this type of interferometer, two laser beams with slightly different frequencies, called the signal and reference beams, are generated.Compared to other interferometer types, heterodyne laser interferometers offer several advantages, such as enhanced signal-to-noise ratio, better immunity to environmental disturbances, and higher resolution. These interferometers are commonly used in precision metrology applications, including surface profilometry, nanometrology, and vibration analysis.
