According to our (Global Info Research) latest study, the global Heterogeneous Chip market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Heterogeneous refers to combining computing units with different process architectures, different instruction sets, and different functions such as CPU, DSP, GPU, ASIC, and FPGA to form a hybrid computing system. Heterogeneous chips are a type of chip that combines two or more different types of processor or controller architectures. Each architecture makes up for each other's shortcomings. This design method allows heterogeneous chips to handle multiple types of tasks at the same time, thus To improve the overall computing efficiency, 3D packaging technology is generally used for packaging.
