Abstracts

According to our latest research, the global Heterogeneous Integrated market size will reach USD 59570 million in 2031, growing at a CAGR of 12.2% over the analysis period.

Heterogeneous Integration refers to the technical solution of integrating chips with different process nodes, materials, functions or architectures (such as logic chips, memory chips, sensors, optoelectronic devices, etc.) into a single system through advanced packaging, interconnection or system-level design to achieve performance improvement, power consumption optimization and functional expansion. Its core goal is to break through the physical limitations of traditional 'single-chip integration' (such as the slowdown of Moore's Law) and promote the development of 'More than Moore'.
