## Abstracts

Heterogeneous mobile processing (HMP) and computing deploy number of components on a single silicon chip. Two or more components can be fragmented on the silicon chip such as central processing unit, a graphical processor unit, and so on in order to provide improved performance and power efficiency. Heterogeneous mobile processing enhances the 3D graphic capabilities. It can also be used to perform rigorous mathematical calculations on large data sets. Electronic products such as notebook, smartphones, tablets, and smart TVs are on the list. Heterogeneous mobile processing (HMP) and computing offer several advantages including improved display clarity, real-time language interpretation, video conferencing, and translation among others.
