Abstracts

According to our (Global Info Research) latest study, the global Heterojunction (HJT) Technology market size was valued at US\$ 2090 million in 2024 and is forecast to a readjusted size of USD 3561 million by 2031 with a CAGR of 7.8% during review period.

Heterojunction (HJT) technology is an advanced solar cell technology that combines crystalline silicon (c-Si) with thin-film layers of amorphous silicon (a-Si) to enhance efficiency and performance. This structure reduces recombination losses, improves passivation, and enables higher conversion efficiency compared to traditional PERC or TOPCon cells. HJT solar cells also exhibit excellent temperature stability and bifacial energy generation capabilities, making them ideal for high-performance photovoltaic applications.
