According to our (Global Info Research) latest study, the global HEUR Thickeners market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

HEUR (Hydrophobically modified Ethoxylated Urethane) Thickeners are a type of rheology modifier used in various industries, including coatings, adhesives, and personal care products. These thickeners are synthesized by attaching hydrophobic groups to ethoxylated urethane polymers, resulting in a unique molecular structure that provides excellent thickening and rheology control properties. HEUR Thickeners offer benefits such as high efficiency, shear-thinning behavior, improved stability, and compatibility with various formulations. They are commonly used to enhance the viscosity, stability, and application properties of liquid products, enabling better control of flow behavior and improved product performance.

The industry trend for HEUR Thickeners is driven by the increasing demand for advanced rheological modifiers in a wide range of applications. As industries continue to develop products with specific rheological characteristics, such as improved sag resistance, leveling, or spatter control, the demand for efficient and versatile thickeners is growing. The trend includes the development of HEUR Thickeners that offer enhanced efficiency, compatibility with different formulations, and improved stability under various conditions. Additionally, there is a focus on developing eco-friendly and low-VOC (volatile organic compounds) HEUR Thickeners to meet regulatory requirements and environmental concerns. The industry aims to provide innovative and sustainable solutions for rheological control in diverse product formulations.
