## Abstracts

According to our (Global Info Research) latest study, the global Hearing Screening and Diagnostic Devices market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The hearing screener device has low sensitivity in detecting the presence of possible hearing loss in children when used in the school setting. Thus, the hearing screener device is not an ideal tool to use in the mass hearing screening of children in the school setting where there are no soundproof booths and with significant levels of ambient sound. Its excellent specificity may support its use
