Abstracts

The global Hexachlorodisilane market size is expected to reach \$ 427 million by 2032, rising at a market growth of 7.7% CAGR during the forecast period (2026-2032).

Hexachlorodisilane, with the molecular formula Si_2Cl_6 , is abbreviated as HCDS, also known as hexachlorodisilane and hexachlorodisilane. Hexachlorodisilane is a colorless, transparent liquid with stable performance and low volatility. It reacts violently with water and is insoluble in alcohols and strong bases. Hexachlorodisilane belongs to chlorosilane and is one of the products with higher application value among oligomeric chlorosilanes. It is an organic intermediate that can be used to prepare products such as disilane and can also deposit thin films. The semiconductor and solar energy industries are its important downstream markets.

The semiconductor industry has higher requirements for the purity of hexachlorodisilane, while the solar energy industry has relatively lower requirements. Hexachlorodisilane has good low-temperature performance and can replace silane and dichlorosilane. It uses chemical vapor deposition (CVD) and atomic layer deposition (ALD) to prepare high-quality silicon oxide films and silicon nitride films. In addition, it can also be used in the preparation of photochemical optical fibers, siloxane precursors and other products. The development of the HCDS industry is highly dependent on advanced science and technology and technological innovation, especially in the synthesis, purification and application development of fine chemicals.

In addition to its application in the semiconductor industry, hexachlorodisilane is also widely used in high-tech fields such as photovoltaics, LED light sources, integrated circuit packaging materials, etc. With the development of the global economy, especially the rapid growth of the electronic information industry, the demand for silicon-based

materials such as hexachlorodisilane is also increasing.

At present, the production market of hexachlorodisilane is mainly concentrated in Japan, South Korea, the United States, Germany, etc. Hexachlorodisilane is a silane semiconductor precursor and can be used in the semiconductor industry, solar energy industry, optical fiber, etc. Toagosei is the world's first company to industrially produce hexachlorodisilane. With the improvement of production technology and the development of the downstream semiconductor industry, more and more manufacturers are entering the industry, such as DNF and DS Techopia in South Korea, Dupont in the United States, and Evonik in Germany.

The semiconductor industry is the main application field of HCDS. As a cutting-edge technology and high value-added industry, the semiconductor industry has a great impact on other industries. It is a key technology industry with great strategic significance in the entire national economy. Therefore, governments around the world regard it as a national backbone industry.
