Abstracts

The global Hexachloroethane market size is expected to reach \$ 15.96 million by 2032, rising at a market growth of 2.6% CAGR during the forecast period (2026-2032).

Hexachloroethane (CAS 67-72-1) is a chlorinated alkane that exists at room temperature as a colorless crystalline solid with a camphor-like odor. It is practically insoluble in water, soluble in ethanol, benzene, chloroform, and oils, and very soluble in diethyl ether and tetrachloroethylene (Akron 2009, HSDB 2009). Hexachloroethane is stable under normal temperatures and pressures and is considered nonflammable; however, it is incompatible or reactive with alkalis and with metals such as zinc, cadmium, aluminum, hot iron, and mercury (NIOSH 2005).

Major manufacturers of hexachloroethane (CAS 67-72-1) are Scottish Chemical Industries, Changshu Zhenfu New Materials, Nantong Donggang Chemical, Teja Matallurgicals and Chemicals.

The world's top three manufacturers have about 60% of the market share.

India is the world's largest market, with a market share of about 55%, followed by China with a market share of about 40%.

This report studies the global Hexachloroethane production, demand, key manufacturers, and key regions.
