Abstracts

According to our (Global Info Research) latest study, the global Hexafluoroacetone (HFA) market size was valued at US\$ 124 million in 2025 and is forecast to a readjusted size of US\$ 193 million by 2032 with a CAGR of 6.3% during review period.

Hexafluoroacetone (HFA) is a fluorinated organic compound that is a colorless gas and toxic. It is generally transported and sold in the form of trihydrate compounds and is mainly used as an organic solvent. It can be copolymerized with cyclohexane to obtain high-temperature and corrosion-resistant coatings and adhesives. It is also an important raw material for the synthesis of pharmaceuticals, agricultural products, polymer materials, and organic chemicals. In recent years, industrial applications have mainly been used for the production of hexafluoroisopropanol, hexafluorodiamide, bisphenol AF, etc. In 2025, global Hexafluoroacetone (HFA) production reached approximately 3,243.39 Tons, with an average global market price of around US\$ 37.20 per kg.

The hexafluoroacetone (HFA) industry shows a clear vertical integration development characteristic. The core enterprises in the industry are mostly large fluorine chemical groups, whose business scope often covers upstream basic fluorine raw materials, midstream HFA and its derivative manufacturing, as well as downstream high-end fluorinated polymers, pharmaceutical pesticide intermediates and other application fields. This integrated model enables enterprises to effectively control the supply of key raw materials, ensure seamless production processes, reduce overall costs, and lock in profits and enhance their ability to withstand cyclical fluctuations by extending downstream high value-added applications. Market competition is not only a competition of individual products, but also a competition of the comprehensive strength of the entire

fluorine chemical industry chain.

HFA is the core precursor of various fluorinated functional units, which can be derived from pharmaceutical intermediates, pesticide intermediates, fluorinated functional monomers, and special solvents. Especially in the fields of high-performance polymers (high temperature resistance, corrosion resistance), bisphenol AF, hexafluoroisopropanol, etc., its irreplaceability forms a stable technical barrier and long-term demand pull.
