According to our (Global Info Research) latest study, the global HFO Blowing Agent market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

HFO (hydrofluoroolefin) blowing agents are not flammable, have zero Ozone Depletion Potential (ODP), and are low GWP. A low GWP product doesn't trap heat in the earth's atmosphere to contribute to global warming? HFC used to be the main blowing agent, but it is currently a substance on the reduction list of the Kigali Amendment. Under the 'Double Carbon' goal, expanding the application of environmentally friendly blowing agent technology is one of the important measures to reduce the emission of non-carbon dioxide greenhouse gases such as hydrofluorocarbons (HFCs). Compared with HFC, HFO is more environmentally friendly and has a brighter future.
