Abstracts

The global HFO Blowing Agent market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

HFO (hydrofluoroolefin) blowing agents are not flammable, have zero Ozone Depletion Potential (ODP), and are low GWP. A low GWP product doesn't trap heat in the earth's atmosphere to contribute to global warming? HFC used to be the main blowing agent, but it is currently a substance on the reduction list of the Kigali Amendment. Under the 'Double Carbon' goal, expanding the application of environmentally friendly blowing agent technology is one of the important measures to reduce the emission of non-carbon dioxide greenhouse gases such as hydrofluorocarbons (HFCs). Compared with HFC, HFO is more environmentally friendly and has a brighter future.

This report studies the global HFO Blowing Agent production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for HFO Blowing Agent, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
