In the modern automotive industry, HID headlights have become the representative of the new generation of automotive lighting with their excellent lighting effects and efficient energy utilization. HID is an advanced gas discharge lamp technology that uses xenon and argon as the main luminous materials, and generates light sources by exciting the gas with a high-voltage arc of up to 20,000 volts. Compared with traditional halogen bulbs, high-intensity discharge lamps provide brighter and more efficient light output. They also have a longer service life and are a cost-effective choice in the long run.
