Abstracts

The global High Acid Palm Oil market size is expected to reach \$ 720 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032).

In 2025, global high-acid palm oil production reached approximately 303 kilotons, the average price is 1600 usd/ton. High-acid palm oil is a 16-carbon monounsaturated fatty acid (monounsaturatedfattyacid, MUFA, the double bond is located on the 7th carbon atom of the carbon end (16:1n-7) (21 its density is 0.905 (g/mL, 25 /4°C), the melting point is 0.5~1°C. Palmitoleic acid is hardly soluble in water, easily soluble in alkali solutions and organic solutions such as ether, chloroform, n-hexane, ethyl acetate, etc. It is a colorless and transparent liquid at room temperature .

Market Concentration and Key Players:

Internationally, the market concentration of high acid palm oil is relatively high, mainly concentrated in developed countries such as Europe, America and Japan. For example, IOI Group and Musim Mas and other large manufacturers; from the domestic point of view, high acid palm oil still has a lot of room for development.

Manufacturing Processes and Market Trends:

The core of the preparation process of high acid palm oil lies in the precise control and transformation of raw materials with high acid value. The raw materials mainly come from overripe or damaged palm fruits. The content of free fatty acids in these fruits is increased due to high lipase activity. During production, palm fruit strings need to be timely sterilized at high temperature to inactivate lipase and inhibit the further increase of acid value. Then, crude oil is obtained through fruit removal and pressing. Crude oil needs to be refined through degumming, deacidification and the like. Deacidification is the key step. Physical or chemical methods can be used to reduce the content of free fatty acids to meet applicable standards.

In terms of market trends, high-acid palm oil maintains stable consumption demand in food manufacturing industry, chemical industry and biofuels by virtue of its obvious price

advantage, and the global and China market scale shows a steady growth trend. The main driving factors for future market growth include the rapid growth of demand in the biofuel field, as well as the continuous improvement of refining technology, which makes the application scope of high-acid palm oil continue to expand, and the industrial chain integration and sustainable development requirements will also profoundly affect the industry pattern.
