Abstracts

High Altitude Aeronautical Platform Stations (HAAPS) is a technology which facilitates wireless narrowband and broadband telecommunication services as well as broadcasting services with the help of different kind of platforms such as airships or aircrafts. High altitude aeronautical platform stations can cover a service area of approximately 1000 km diameter. This coverage of service area depends on minimum elevation angle accepted from the user's location. High altitude aeronautical platform stations consist of an airborne platform with a telecommunications payload, and associated ground station telecommunications equipment.
